### Atmosphere Mineral Range

An ULTRA-LOW VOC paint system that absorbs atmospheric formaldehyde typically found in carpet, joinery and furniture.

An eco-preferred breathable coating that eliminates the use of chemicals with a combination of mineral silicate and graphene base to provide strength and durability.

A unique solution that is an ideal choice for the health of our homes and environment.

## THE ORIGINAL & AUTHENTIC

### It's time to turn it around...

Graphenstone products are formulated with raw materials that have passed the VOCs, and formaldehyde testing as well as Global GreenTag ingredient toxicity assessment. Independent testing has shown that their composition can contribute to improved indoor air quality by absorbing CO<sub>2</sub>.

To construct the buildings of the future requires a new way of thinking to traditional low VOC, synthetic paints. They must utilise environmentally friendly, not-toxic ingredients to implement the concept of truly sustainable construction finishing.

We have challenged, refined and evolved the way we think about paint, developing a range of coatings free of harmful emissions making them an ideal choice for passive houses, green buildings and smart cities.
